PRESIDENT'S LETTER

Welcome to the Journal of The New Zealand Society of Dowsing & Radi-omics Inc. for June 2018. The farmers of New Zealand are devastated by the news, that Mycoplasma Bovis is now widespread in both the North and South Islands and

is confirmed in 300 herds of dairy cows. New Zealand was one of only two countries in the world who were free of this disease which is caused by bacteria spread by cow to cow contact and affects the cow's joints and her milk quality. Sheep can also carry Microplasma Bovis but the meat and milk of both species is still fit for human consumption.

As a farmer and a dowser I know that plants and animals that are weakened by dis-ease through nutrition and are the first to be attacked by bugs, bacteria or virus. A few years ago, the farms in the North Island were struck by a clover flea which eats clover leaves and severely affects nitrogen fixing properties of this important plant. Our farm had clover flea but no damage due to the balancing of trace elemnts and general health of the soil resulting in vigorous clover able to resist the clover flea.

With this in mind I have dowsed to find what the typical cow affected by Microplasma Bovis is lacking in the way of minerals and have concluded that diet is the common factor in most cases. Palm kernel is an incomplete food after the oil, has been extracted and is something a cow would not eat in a natural world. The other is my pet grouch which is the use of urea that robs nutrients from the soil. Both of these have resulted in weakened immune systems that have allowed infections such as Microplasma Bovis to gain a foothold in the cow. But don't take my word for it, dowse it yourself.

Another example of poor diet creating a weakness that allows disease entry to the body was that of my dog in the 1970s. He was fed dog biscuits as were other dogs on the farm but he contracted mange, which is a mite that lives in the skin causing hair loss and itching. This mange persisted through weekly pharmaceutical washes, which only made him smell better, but not stop scratching. Break-through came when he was fed fat scraps from the butcher's room on the farm. The mange vanished overnight and returned only when the fat scraps ran out and the crackers were fed again. This is an example of feeding cooked meats and grain in the form of dog biscuits as opposed to a carnivorous diet of raw meaty fat scraps,

resulting in poor skin health that allows parasites to flourish.

At this point I could go on about Microplasma Bovis, a Green government; too many cows; pollution and the death of common sense, but I won't. I will say that I enjoy having the gift of being able to dowse and sort the fact from the fiction. I enjoy being able to grow things on the farm, and help people around me, and help people who I have never met on the other side of this planet. Our spirit has no boundaries as taught by very wise dowers here and overseas, and the best company is that of our Dowsing Society members.—Ren Ellett

MEETINGS—PAST & FUTURE.

March 24th Field trip to a big oak tree in the park at Chedworth Drive, Glenfield. A mature English Oak planted on a significant energy point and preserved by a post and rail fence around it beyond the drip line. This tree's energy enhances the natural upward rising spiral which is clockwise from the top view. Radial energy lines emanating from the tree trunk end in a clock wise spiral also. There was much speculation on who planted and maintained the tree and whether the enhanced energy is linked to other energies across the city. We then had lunch at a great little café and were the noisiest table by far. Thank you to David Campbell, for finding the tree and organising the day.

April 16th An interesting workshop was held on 'Raising the energy of the body.' President Ren, spoke using guidelines from Albino Gola and Raymond Grace on how to clear negative energies, entities, electro-magnetic fields and geopathic stress. Once completed, the body energy measured in Hertz, can be lifted by using our water prayer, crystals or the energy of a big old tree, among other things.

May 5th **INTERNATION BOWSING DAY** was celebrated by meeting at a garden centre in central Auckland. We met with the intention of dowsing the layout of plants shrubs and trees by the green fingered staff. Plants were already placed in blocks with other plants shrubs and trees of compatible energies by people who feel the energies and don't bother with pendulums and rods. This exercise was acknowledged by our group who headed straight for the coffee shop where we had lively discussions on all things dowsing over lunch.

May 21st At a member's request, farmer President Ren gave a brief explanation of Mycoplasma Bovis,

how it affects cows and how culling affected animals will impact on farmers and the national economy The big screen was brought out and David Campbell presented DVD clips on interesting energy lines to complete the evening

June 18th Viewing of Raymon Grace's DVD on Prosperity.

July 16th The return of a popular speaker but who we haven't seen for a long time, Peter Paterson. A man with great knowledge in many areas, this evening he will share his interest in the 'mythology and secrets of spiders.'

August 20th A workshop, subject yet to be decided upon.

.....

THE BODY ELECTRIC

INTRODUCTION:

We are continuously bathed in the energy of electromagnetic fields (EMF). This energy spectrum is a continuum of many wavelengths, from ionizing radiation (radioactivity) to the more common non-ionizing radiation – all invisible except for visible light. Man-made irradiation is produced by microwave ovens, electric blankets, lighting, motors, radio and TV transmission, radar and other electrical uses. The earth, sun and moon all have characteristic EMFs and our own bodies produce many such fields. Overall, we are exposed to an enormous range of frequencies and intensities.

Our bodies work electrochemically; electric impulses flow in living tissue, so it is logical to expect that natural and man-made EMFs interact with biological processes. However, as recently as 7 years ago, there was no agreement about the potential for EMFs to cause biological effects. A large mass of research has ended that debate: EMFs are capable of a wide range of effects on living organisms. The controversy has now shifted to whether these effects are harmful.

The therapeutic uses of EMFs have grown considerable, promotion of bone and soft tissue healing, pain relief, control of osteoporosis, drug detoxification, Therapeutic Touch, control of epileptic seizures, ultra sound for monitoring and therapy, non-invasive monitoring of brain and heart activity (EEG and ECG), Polarity Therapy etc.

If specific applications of low level EMGs applied by a physician can be therapeutic, it is not logical to assume that exposure to fields from transmission lines or home and industrial use of electricity would not affect health. Reported harmful effects associated with EMF exposures include leukemias, changes in brain and blood calcium balance, some birth defects and many stress type symptoms.

THE EARTH'S GEOMAGNETIC FIELD

The earth acts as a huge bar magnet with north and

south magnetic poles and a relatively symmetrical field on the surface. The earth's field strength has varied over time and the poles have reversed, but a field has existed since before life originated. The major component of this field is generated within the earth, but there are also cyclic components derived from the sun, the moon and probably all celestial bodies. This combined field provides directional information as well as the very precise daily and seasonal variations necessary for synchronizing our biological clocks. Locally, the geomagnetic field is affected by mineral deposits, earthquake and volcanic activity and large storm systems.

Life on this earth has evolved within this geomagnetic field. Many organisms are known to use the field for orientation and navigation, either as a primary cue or as a back-up when more obvious cues, such as the sun and stars, are not available. The animals are directly related to cyclic solar and lunar EMF fluctuations. It is no coincidence that the low frequency micro-pulsations of this field are in exactly the same range as our brain waves. Until recently, however, no method of sensing or interpreting this information was known, and most scientists discounted the importance of EMF radiation.

HOW WE SENSE THESE FIELDS – TINY MAGNETS

Until 1975, there was no known magnetic field receptor. In that year, the discovery of magnetite was reported in bacteria. This microscopic deposit is biogenic, i.e. synthesized by the living organism rather than the mineral ore mined from the earth. It is the mechanism that keeps these bottom dwelling bacteria in the sediment of their marsh habitat. Since this finding, biogenic magnetite has been found in a wide range of organisms: honeybees, tuna, dolphins, migratory birds and fish, turtles, whales, monkeys and humans. It is likely that all living organisms have one or more organelles of magnetite used for a number of daily functions. It appears to be a common biological product that had not been previously discovered for two reasons: no one looked and only recently have adequately sensitive instruments been available.

There are at least two areas where our bodies deposit these particles: the sinus areas behind our nose, and throughout our adrenal glands. It is thought that the deposits in the sinus are used by us for magnetic direction finding, while the adrenal deposits are necessary for setting our biological clock as well as for "sensing that something is wrong" prior to a storm or earthquake or for getting a "feel" of someone upon first meeting, even without seeing the person come in a room. There is also evidence that a magnetic sensing mechanism is associated with the retina of the eye.

LIFE IS AN ELECTRIC PHENOMENON-THE AURA

Our body generates many hundreds of individual minute electric currents, some very short lived, other fluctuating but fairly continuous. Each of these produces its

own electric and magnetic field in the surrounding tissue and air, lasting as long as the current flows. These currents involve brain activity, blood flow, nerve firings, muscle activity (including the heart) pumping of spinal fluid, and also piezoelectric currents on our long bones (walking, standing, running, etc.)

These individual fields interact to form our aura. While the aura has been a foundation of metaphysical teachings for centuries, it is only recently that western medicine has been able to measure this external expression of internal activity. Heart and brain wave activity are now measured externally without surgically implanting electrodes. These fields have also been mapped to determine areas of brain tumours and the location of mental disorders through the external monitoring of the EMFs associated with the specific region of affected brain tissue. This interaction can work both ways, or course. Internal electric activity produces the external field, while interaction with EMF can affect internal electric activity and therefore biological processes. It is this external EMF, the aura, that is manipulated in Therapeutic Touch, a procedure recognized in western medicine for relaxation, stress relief and pain reduction.

GROWTH CONTROLLED BY ELECTRIC SIGNALS – OSTEOPOROSIS

The electric currents generated by routine stress of bones are in turn, the signals necessary for bone growth and healing. A mix-up in the signal affects the shape of a bone or creates one which won't heal. Recent techniques simulating this low electric current across broken bones have all but eliminated the non-unions which previously ended in some 2000 amputations per year. This stressor action and the associated electric current also appear important in osteoporosis. There is daily cycle of calcium deposition and removal in bones and brain tissue. Weightlessness and prolonged confinement to bed reduce calcium deposition and contribute to osteoporosis.

Very low level man-made EMFs affect brain and blood calcium binding cycles, apparently upsetting our own EMF system involved with bone shape and mass development, possibly again causing osteoporosis. Externally applied EMFs have been used in space suits and in extreme cases of osteoporosis to help build bone mass. This very common and debilitating disease of older folks may soon be alleviated by therapeutic EMFs.

MAN-MADE EMFs IN THE ENVIRONMENT

Although our use of electricity is a little over 100 years old, it has only been since the late 1940s that we have exposed ourselves to high levels of EMFs of varying characteristics. We have changed our electromagnetic exposure more than any other aspect of our environment. These invisible energy radiations exist throughout the world. EMFs emanate from all electri-

cal use, i.e. electric power lines, lighting, kitchen and shop appliances, motors, electric heating, radiation from radio and TV transmission, satellite and other communication systems, and radar and medicinal uses of EMFs. The strength of an EMF decreases rapidly with its distance from the source. The electric fields component may be distorted, shielded, or blocked by the individual, a house, tree, etc., whereas the magnetic component penetrates almost everything unchanged.

STUDIES OF BIOLOGICAL EFFECTS OF EMFs.

In the 1970s concern was raised over the electric fields that would exist along the large electric transmission lines being proposed at that time. Because of this and similar concerns raised about a major antenna system designed by the Navy for worldwide communications with submerged submarines, research was initiated to determine the effects on humans living or working near these facilities, since then, research studies every year by the electric utility industry and by the U.S. Departments of Defence and Energy. Some of these studies, particularly in the early years, were poorly designed and unproductive, with some scandals and cover-ups. Results in recent years, however, have contributed to the recognition that we are exposed to and affected by man-made EMFs at various frequencies and strength from our use of electricity. Ironically, it appears that the level of exposure to biologically active distribution systems in residential areas may be as much of a concern as the EMFs from the new lines that prompted the research.

STRESS AND IMMUNE SYSTEMS EFFECTS – THE STRAW THAT BREAKS THE CAMEL'S BACK

It appears that the stress response is one of the most important effects that EMFs have. This stress syndrome is measured by changes in reaction time, ability to concentrate, sleep patterns and brain function tests, endocrine system changes, a variety of blood changes as well as changes in growth systems and immune response measurements. What is not yet known is how serious these changes are and how many people they affect.

This is difficult answer to obtain from routine scientific research which requires uniformly healthy participants (lab animals or humans). The results therefore can only be applied to healthy individuals. This test bias is particularly important with prescription drug or EMF stress effects. Exposing someone who is already experiencing a heavy load of emotional or physical stress to a particular lever of EMF COULD VERY WELL EXACERBATE A POOR SITUATION; HOWEVER, THE SAME EXPOSURE LEVEL MIGHT HAVE NO NOTICEABLE AFFECT ON A HEALTHY INDIVIDUAL. Another complication is the potential for additive effects with other treatments. As with the recognized interaction of drugs and alcohol, the side effects of

some glaucoma treatments, Librium and other drugs are increased with exposure to some EMFs. LEUKEMIAS, BIRTH DEFECTS, CANCER GROWTH AND....

The first study clearly associating EMF EXPOSURES TO HUMAN HEALTH PROBLEMS occurred in Denver in 1979, where 344 deaths from childhood cancer from 1950 – 73 were studied in relation to the wiring characteristics of the home and the distance to nearest transformers. Childhood death rates from leukemia, lymph node cancer, and nervous system tumours in the high current homes (those with strong magnetic fields) were more than double the rate in low current homes. Later studies contain similar findings.

There have been a dozen or more studies of the relative risk of leukemia in the work environment. Adults who work in strong EMFs have a leukemia incidence significantly higher than the norm. Such occupations are electrical equipment assemblers, telegraph, radio and radar operators, power station operators, welders, etc. Also high voltage switchyard workers appear to have an increased rate of genetic damage and birth defects.

Extensive use of electric blankets and/or waterbed heaters during pregnancy seems to be related to reduced birth weights and an increase in spontaneous abortions. An electric blanket produces a relatively high EMF at the waist of a user, while the field, at the waist of a person standing in a transmission line field, is effectively zero because of the shielding due to the upright position. Embryos develop electric currents which play a role in their own future development and it is likely that this process is affected when a man-made field exists in the fetus and surrounding fluid and tissue.

THERAPEUTIC USE OF EMFs MAGNETIC HEALING

There is a healing tradition in many societies that referred to magnetism and magnetic healing long before modern medicine or our present understanding of electricity. This tradition has entered our society with varying levels of acceptance and success in the forms of spiritual healing, laying-on-of hands, psychic healing, faith healing, Reiki, Reiko and Mari EI. Other EMF therapies have a broader acceptance, documentation and clearer success, such as Polarity Therapy, the 2500 year tradition of acupuncture and acupressure and our nursing school development of Therapeutic Touch. Some of the present medical applications of EMFs in monitoring and healing have already been mentioned, such as EEGs, bone healing, relief of chronic pain, reducing osteoporosis and drug detoxification. Similar applications are likely to increase tremendously.

EMFs possess the potential to alleviate symptoms or arthritis through cartilage restoration, to reduce ulcers and some cancers, to provide anaesthesia, and to correct some genetic birth defects. There is evidence that EMFs increase the mitotic rate of growing cells. While this would promote healing, it might also accelerate the

growth of malignant tissue.

The Quester –Vol 10 No.1 Jan-Mar 1990

BRAIN WAVES

By John Living

In 'The Day after Roswell', Col Philip Corso mentions that the "medical examiner wrote that measurements of the brain activity ... showed that its electronic signature ... displayed a signal similar to what we would call long, low frequency waves. ... the brain lobes seem to have been not just physiologically and neurologically integrated but integrated by an electro-magnetic current as well."

He found this report disturbing, because it reminded him of suggestions made by some leading Italian scientists to him privately just after World War 2. Dr Gislero Flesch, professor of criminology and anthropology had told him of his theory of experiments on 'the basis of life'. He proposed that there was a 'filament' within each cell which "was activated by some cosmic action or form of electro-magnetic radiation that bombarded the earth continuously from outer space and resonated against a constant refresh of electrical activity from the brain."

Dr Flesch said "The electro-magnetic forces in the body are the least understood, yet they account for more activity than anyone realizes." He introduced Corso to Professor Casmiro Franck, one of the first people to ever photograph brain waves, and who had been able to trace long, low frequency waves generated by animal brains and trace the path taken to the muscles.

"Certain muscles were attuned to respond to certain wavelengths of specific frequency. In cases of muscle paralysis, it is not the muscle that is necessarily damaged, it's the muscle's tuning mechanism that has become disabled so that it no longer picks up the right frequency. It is like a crystal radio, where the crystal needs readjustment."

Corso also met the celebrated research biologist and physician Dr Castellani, who has found that many skin rashes, psoriasis, or inflammations that looked like bacterial infections are curable by changing the skin's electro-magnetic resonance, so allowing the long, low frequency waves from the brain to do the needed healing. He had developed an ointment to achieve this change of resonance in skin cells.

"All three men were using these electro-magnetic waves to promote healing in ways that I considered astounding. They made claims about the ability of electro-magnetic treatments to affect the speed at which cells divide and tumours grow. They claimed that through directed electro-magnetic wave propagation they could cure heart disease, arthritis, all types of bacteriological infections that interfered with cell function, and even certain forms of cancer."

"I spent many hours with them ... they did not have the research funds nor the endorsements of the medical societies to allow them to expand their work or to treat patients with their unconventional methods."

So it is probable that this research has been forgot-

ten – filed away and ignored ! Such low frequency waves would be in the Delta-Theta range. Can we, as Dowzers, use our ‘Power of Thought’ to accomplish such changes – to re-tune body cells to respond to these healing emanations

.....

LEMURIAN CRYSTALS

were first discovered in Brazil in 1999. They were found in sand on the top of a hill near a quartz mine. Immediately they attracted attention as they were unlike any other crystal previously found in the area and were not from a crystal bed like the quartz in the mine. The first Lemurian crystals found were quite frosty and dull in appearance but with the unusual characteristics of lines (striations) down the sides.

To preserve their knowledge and energies the Lemurians programmed seed crystals with the message of oneness and buried them all over the world to be discovered when mankind were ready. This time is now; they are being rediscovered (resurrected) to aid humanities’ spiritual evolution which is accelerating at a rapid rate. So far the crystals have been found in Brazil, Colombia, Mexico, Peru, Arizona, Arkansas, California, Colorado, Montana, North Carolina, Oklahoma, Washington, Madagascar, Mozambique, Namibia, South Africa, Zambia, Russia, India, China and Tibet although this list is by no means complete.

The Lemurian crystals will help us to return to a heart based society, each person working with them has an energetic affect on those up to 10 miles around them. Connecting with a Lemurian crystal will help you become more aware of your intuition and access a higher consciousness. They help you open your soulstar chakra, bringing in a higher energy to open your heart centre and help you heal emotional wounds. In healing ourselves and others we also heal the planet moving us on to the next stage of our evolution – The Golden Age.

A Quartz Lemurian crystal is usually recognised visually by horizontal striations (lines) on one side and smooth the next although this does vary. Although usually clear some Lemurians are slightly pink due to a light transparent coating of iron oxide. If they are very pink they may include lithium and rare pieces can be orange, light blue, smokey, purple, even hematite in colour.

All Lemurian Crystals are record keepers of Lemurian and Galactic history. Some have raised or indented triangles typical of the trigonic triangles of other crystals allowing access to akashic records. Others may have more subtle triangular markings on them like this example, some say these are also record keepers. They connect with each other to create a grid of energy, when worked with this energy is magnified and the grid grows stronger.

<https://www.lemuriancrystalattunements.com>

Understanding crystals and their attributes is a complex study in itself, but with the use of one’s pendulum, the choice of which crystal for you at any particular time is a pendulum swing away. Ed

INTRODUCTION TO EARTH ENERGIES

By Richard Creightmore & Jewels Rocka

LEY LINES & POWER SPOTS

Ley lines are lines of energy running over-ground in straight lines, often reflected in ancient trackway lines and alignments of prehistoric and historic sacred sites in the landscape.

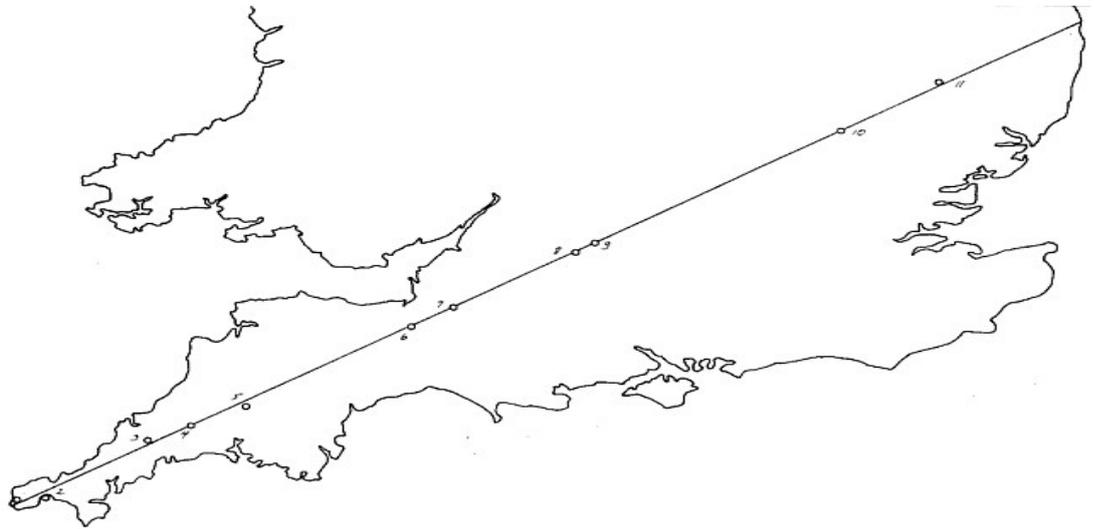

Ley lines are properly defined as straight over-ground energy lines that echo the sinuous paths of larger underground rivers. They carry Yang Qi relative to the Yin Qi of underground water, and are associated with Heavenly consciousness and human spiritual ceremonial sites. These straight (at least over dozens of miles) spirit paths are found equally in China as elsewhere in the world, and frequently define the processional routes to major palaces, temples and cathedrals. Appropriate for sacred sites, these energy pathways are less comfortable for secular living, and houses built on them are generally a thoroughfare for all manner of spirits.

They can be compared and contrasted with the more yin underground water lines as a yang energy matrix associated with a more heavenly consciousness, and are frequently worked by human ceremonial practice at sacred sites designed and constructed at key points in the landscape along these lines.

Straight lines in the landscape can be divided into three types:

The first are represented by lines of one or other of the global geomagnetic grids, and the ‘Second Schneider Grid’ is especially related to the paths of Roman roads in Europe.

A second type of line is exemplified by the 41 lines radiating from the Sun Temple in the middle of Cuzco, central Peru, along which shrines, temples, graves, sacred hills, bridges and battlefields lie. These are derived from the deliberate imposition of a geometrical design

St. Michael's Line:

1. St. Michael's Can Brea. 2. St Michael's Mount. 3. St Michael's Chapel., Roche Rock. 4. The Cheesewring. 5. St Michael's Brentor. 6. St Michael's Burrowbridge. 7. St Michael's Glastonbury Tor. 8. Avebury. 9. St George's Ogbourne ST George. 10. Royston Cave. 11. Abbey Bury St. Edmunds

(resonant with the central temple design) upon the landscape, as a vehicle for political-theocratic control of a nation.

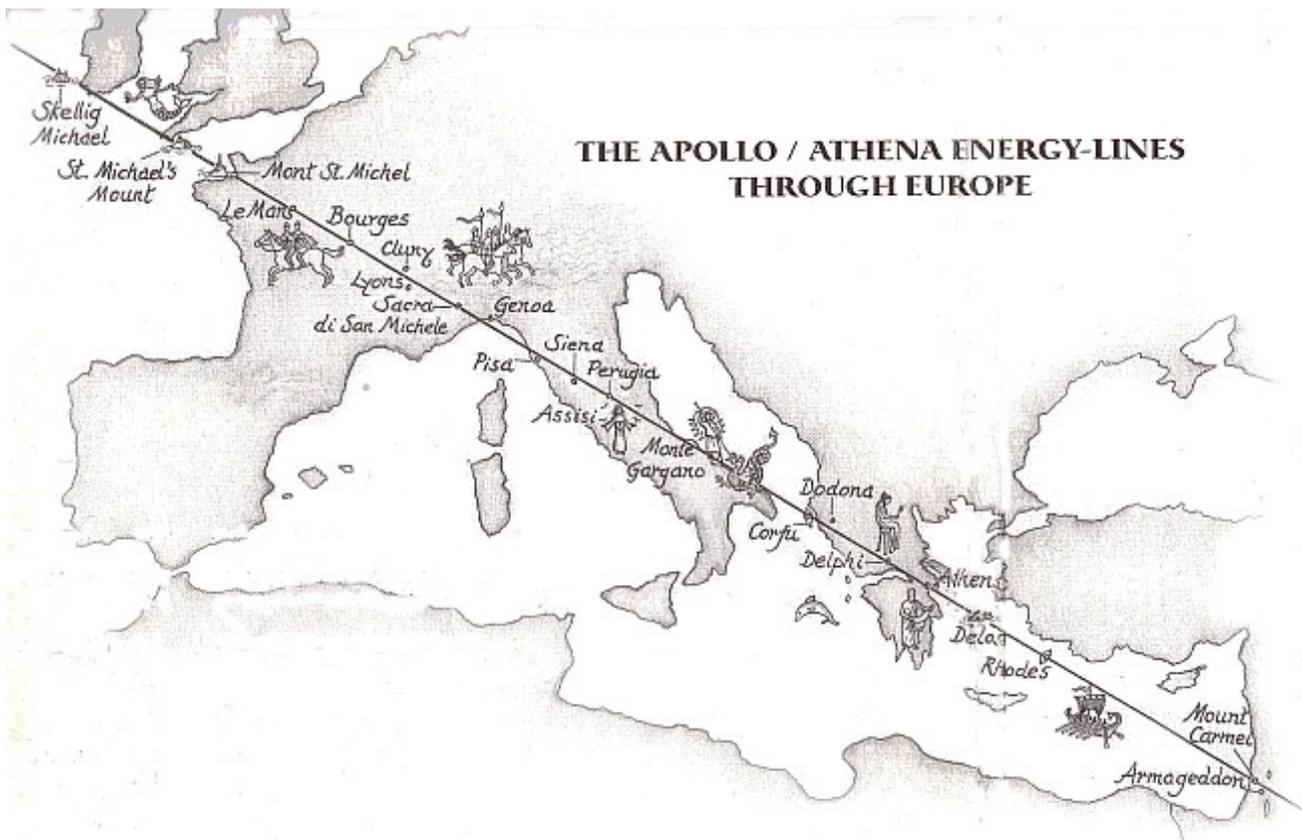

In Cuzco the pattern also interacts with the underground energy currents; in Washington, D.C., a Masonically-inspired geometrical design has been placed without reference to the underground patterns (unlike Canberra, where the Heavenly and Earthly components have been more successfully united).

A third type of line is the classic ley line as described by Alfred Watkins in his 1925 book 'The Old Straight Track'. These are overground lines of energy, straight over perhaps 60 miles with slight changes of path over

longer distances, which echo the sinuous paths of underground rivers across the earth. These carry energy of various types and levels, and can be worked via key points either as part of a programme of regular maintenance for the spiritual hygiene of a land, or as a specific therapeutic action.

MICHAEL AND MARY LINE

Perhaps the most famous Ley line is the 'Michael and Mary' line which runs across England from St. Michael's Mount in Cornwall to Hopton in Norfolk. Twin underground water currents, known as the Michael and Mary lines after the number of churches dedicated to either St. Michael and St. George, or St. Mary found upon them,

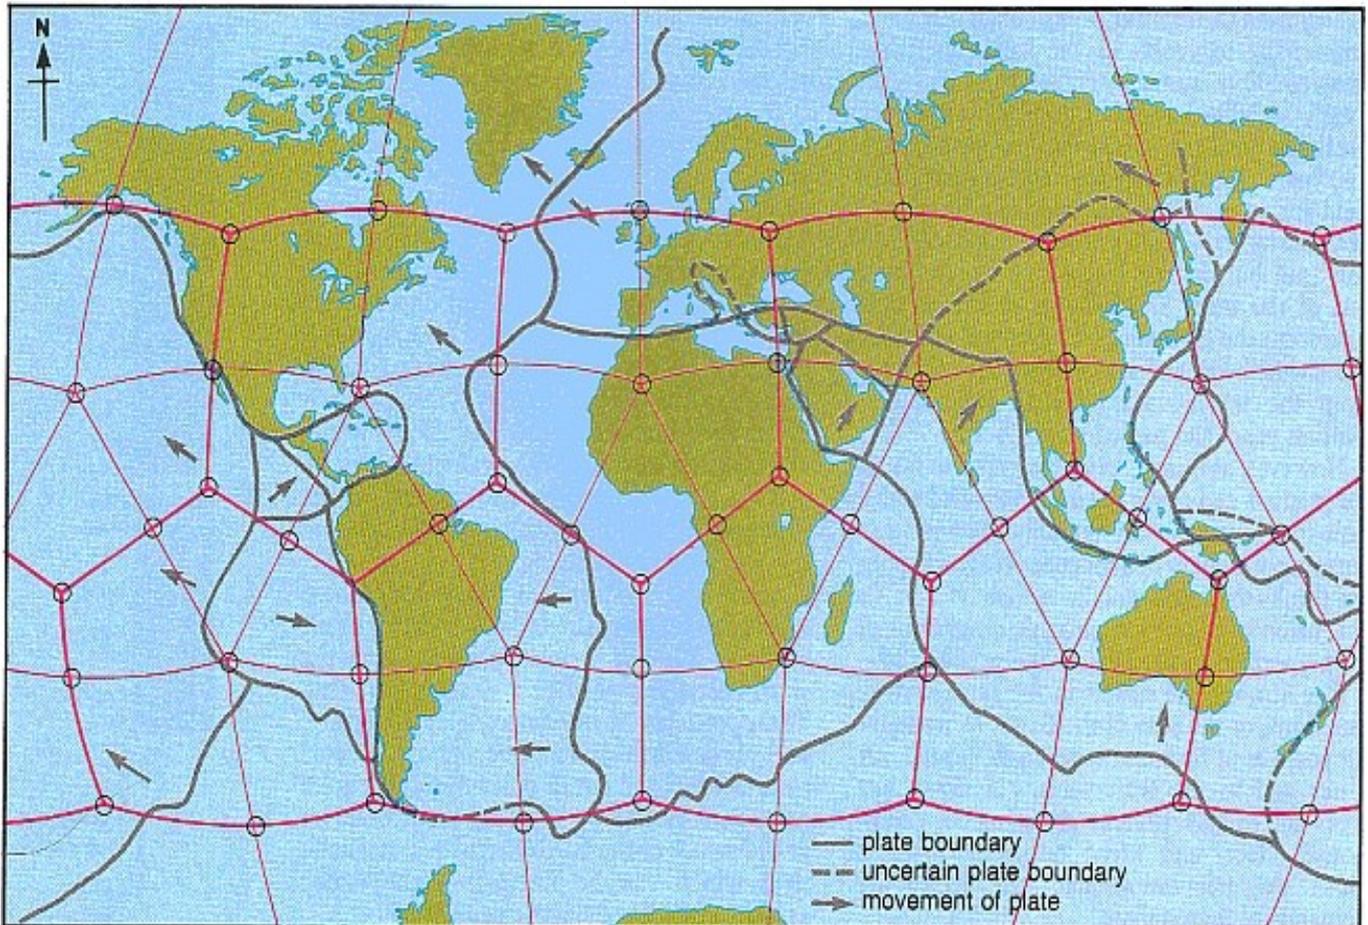

run with a central overground Ley across England, oriented to Mayday sunrise.

This reveals the primal 'Caduceus' pattern that can be found within all such energy lines: a triple-fold axis composed of Fire, Water and Spirit currents, which may be experienced by the practising Geomancer as containing information in the Thinking, Feeling and Subtle Entity realms respectively.

In the Stone Age standing stones were set up on grid line crossings; the Chinese, Indian, Greek, Roman and European Medieval civilizations knew of them, as the location of temples, monuments and cathedrals bears witness.

Further to this article go to: <https://www.facebook.com/landandspirit.net>

GLOBAL GEOMAGNETIC GRIDS

Global geomagnetic grids, of which there are several, follow laws of symmetry and direction. They are thought to arise from the earth's magnetic field as a form of vertical, and sometimes horizontal, radiation. Researchers have found on the lines changes in the earth's magnetic field, the intensity of sferics, (EM signal) the electrical conductivity of the ground, variations in ultra short wave receptions,

increases in positive ions, differences in blood sedimentation rate, and over some grid lines increased gamma radiation.

The grids are at their strongest between 12.00 midnight and 3.00a.m. and at their weakest at 5.00p.m.; they are influenced by earthquakes and weather conditions, and are weaker in fog; they do not rise vertically but at an angle which can change a few degrees during the night; and, unlike underground streams, they are not influenced by phases of the moon.

They show varying weak zones of resonance (echoes) outside the main line; however decorations, mosaic patterns, windows and statue recesses in old churches which indicate the grid lines always correspond to the exact width of the main line.

VERY LONG ALIGNMENTS

By Freddy Silva

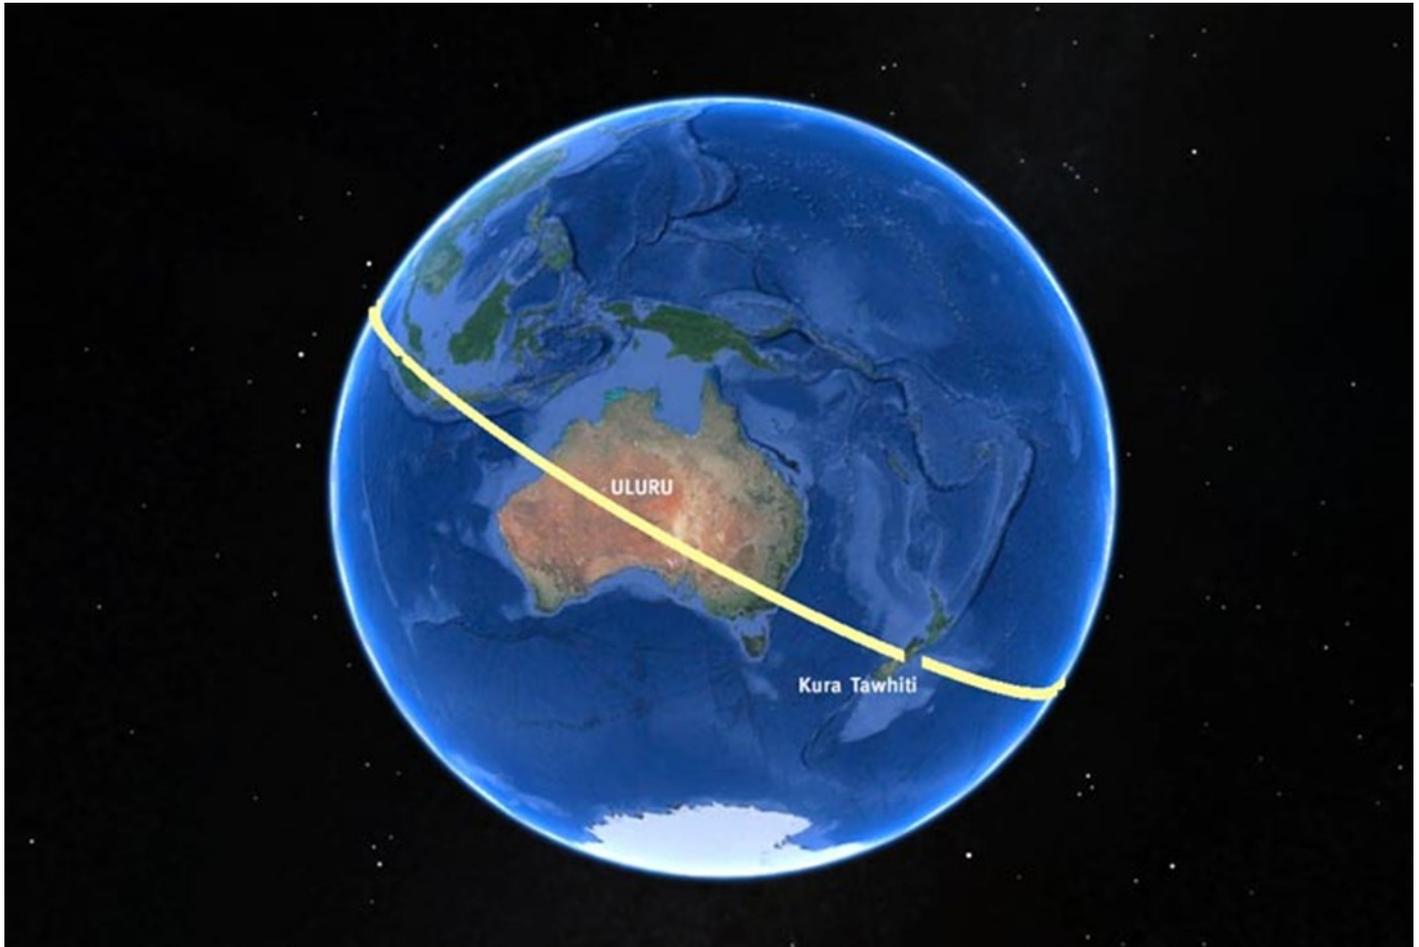

A few of the 800 temples, cathedrals and sacred sites dedicated to Apollo and Athena aligned across Europe. Ley lines can be found all over the world, and their connections vary from local to global.

Where sacred sites are still in abundance, such as southern Britain, it is still possible to reconstruct the old engineering. Leys connecting standing stones with stone circles from the same era throughout Cornwall are well documented.

Then there are those that connect very old places across several continents: the pyramids of Giza connect to Delphi, which connects to Stonehenge that connects to sites in County Sligo, Ireland. Many lesser-known sites exist along this path.

When researchers Broadhurst and Miller were discovering sites across Europe that align at the node points of two magnetic lines of energy, they also discovered how all the sites—and there are dozens of them—formed a diagonal path from one end of the continent to the other. This alignment is known as the Apollo and Athena.

Like the Michael and Mary lines that align to the Beltane sunrise, so the Apollo and Athena follow the general path of the rising sun on the winter solstice. This would

suggest that the ley alignment of sacred sites was done for both geomantic, astronomical, and ritualistic purposes. In Britain, fires would be lit along the Michael-Mary axis at Beltane as part of welcoming the sun's fertilizing qualities upon the land. While we do not know if this practice was maintained in Europe, a line of beacons shining from Skellig Michael on the Irish coast to Meggido in the Middle East would have been quite a sight to behold.

So, it is feasible that once upon a time a colossal

engineering project linking sacred places was undertaken across whole countries. But would our ancestors have dared to try a global ley alignment? The answer is yes.

While in New Zealand I took time to investigate one of the most profound sacred sites in the southern hemisphere, if not the world. Kura Tawhiti, otherwise known as Castle Hill, is a major hill temple consisting of esoteric limestone blocks, some 50-feet in height. Each was used as a 'classroom', and the pilgrim would move fur-

ther up the hill to another stone as they learned their wisdom. The site is said to be as old as the Waitaha, the spiritual race which occupied New Zealand before the Maori.

Initially I was looking for geographic connections to Castle Hill on the opposite side of the world. I noticed that early Maori art is almost identical to ancient Celtic, particularly in its use of spiral flourishes. In fact the two styles of spiritual art are practically identical. The Celtic influence originally extended to what is today northern Spain and Portugal, and if you traced a straight line from Castle Hill through the Earth you end up in northern Spain. In the province of Galicia, to be exact. And this is where the fun begins

Take a line from Castle Hill and aim it at the nearest known landscape temple. In this case, Uluru, -or Ayers Rock in central Australia. If you continue that ley you will reach one of the most beautiful temples on Earth: Borobudur in Java.

If you keep extending the line you will then cross Asia, the Ukraine, central Europe, and eventually arrive in Galicia, at an ancient place of veneration called 'the field of stars'. The Romans named it Campo Stella. Today it is one of the most famous pilgrimage places, Santiago de Compostella.

- Length of ley? A whopping 11,500 miles.

LEY LINE UPDATE

By Francois Capmeil

You may recall the article I wrote in June 2015 on my return from Mont-Saint-Michel in Normandy last year. At the time, my wife and I had been very disappointed with

the level of vitality in the Apollo and Athena lines at the mont.

We had found out that as part of an upgrade plan, the French government dammed the river, built a dyke on the entrance to the Apollo line and placed 3 huge rock barriers, partly buried at the time, blocking the exit of the

Athena line from the mont.

It is clear that the vitality and energy of these lines have a great positive and spiritual impact on human beings. We have both felt this effect and come back from our visits in the past, with changed perspective and inner landscapes. Not so lately.

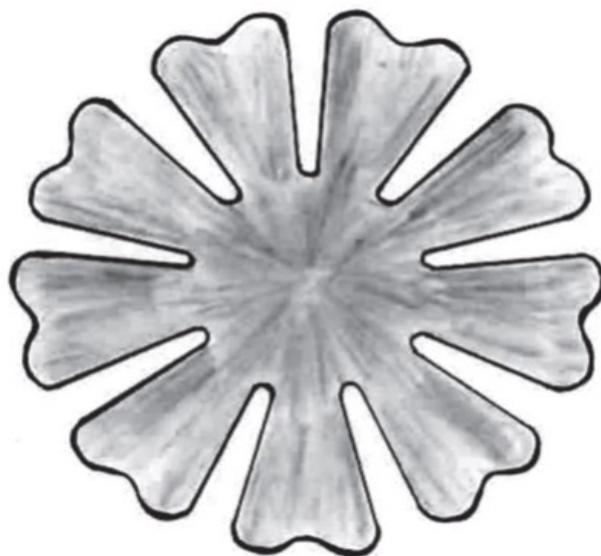

So I feel it is essential that we do take the repair and preservation of these lines of energy 'under our wings'. We will be leaving for France at the end of May 2016, After our visit to Mont-Saint-Michel, we intend to visit other sites further inland following on Hamish Miller's footsteps.

I do not want to come back disappointed again. As a group of dowsers there is something we can do. We know that these lines do respond to human consciousness. **Hamish has proven that at the Castle Rock site, in New Zealand, where he found that the pattern of energy had greatly responded to the human connection he and others made at the time. He describes the interface in his last book 'In Search of the Southern Serpent'. The response took the form of enhanced energy patterns.**

He wrote: "I was excited to find that the number of radials had increased to thirty... The rod quivered in my hand like a tuning fork....."

If Hamish was able to prompt changes in energy patterns like that, what is stopping us as a society to do the same?

So I would like to propose that we all individually and

collectively, or anyway we feel comfortable to do, send our attention, prayers, energy, Grace..... to dissolve the great nasty blocks placed in the pathway of these lines, in Normandy.

If you feel hesitant about what to do, just ask a fellow member, ask at the meeting. We could even have a small segment at the next meeting to do a 'group ley line healing' together. Whatever it takes, let's do it

When I return I will report on our findings, and I sincerely hope that we will be able to report a difference. The effect of these lines cannot be underestimated. In the Middle Ages it prompted people to walk all the way from Normandy, south to the Pyrenees Mountains, and then on to Spain in pilgrimage, with nothing more than a walking staff and small bag.

The spiritual devotion they experienced fuelled the construction of the great churches and cathedrals of France.

In a bit more than a hundred years, 1500 of these were built.

Very poor people spent their savings to purchase one stone to be part of the construction, to be part of history.

What can we NOT do today if we want to?

.....

ALBINO GOLA'S LEGACY

By Alison Ellett

How many times have you tried to explain dowsing and resorted to saying – ‘most people understand water divining, this is dowsing for water.’ This explanation always clears any doubts. Meanwhile your inner thoughts are racing through all the fields one can use dowsing in. It takes a special searching mind to then accept my description that water dowsing is seeking out the energy of the underground water. Everything in creation is composed of energy, so with dowsing you can explore anything of energy. At this point you can tell by the dead pan expression or by the light (energy) in their eyes if

they understood.

I cast my eyes over the different categories in our Society Library: Astrology and Predictions: Colour and Crystals: Dowsing: Earth Energies and Messages: Healing: Health: Magnetics: Paranormal and the Unknown and Forbidden. Quite a variety. Such a wide and varied choice of books to read that while not all on dowsing, we can use dowsing methods in the study of all of the stated subjects. Thinking back over our members, we have known dowsers who have all chosen different paths – earth energies – crystals – homeopathy – colour healing – water divining – health – naturopathy – herbalism – shifting of unwanted entities - EMF detectors and protection - and the list goes on, Just how does someone new to dowsing know which avenue is going to push their button. I suppose it is no different to our school education, have a taste of a cross section of subjects, there's usually one that you are more in tune with. Reading is so important, but also is talking to other dowsers (perhaps questioning and listening is better wording here). I am reminded of the simple saying – ‘we have two ears and one mouth, and this is the ratio they should be used’!

When husband Ren became President of the Society and I was Journal editor the enormity of the responsibility lead us to spend time with Albino Gola. Albino was a very humble man with great integrity. He had known the founders of our Society and seen the growth of the organisation over 50+ years. He explained the pitfalls to watch out for that they had to steer around. We discussed our Constitution and what being an ‘Incorporated Society’ meant, both its advantages and

limitations. In short. 'Those who don't know their history, are doomed to make the same mistakes.' Those mid-week sessions were priceless. Albino taught us such respect for the ability to dowse and the importance of the role of our Society to teach dowsing.

When I was introduced to dowsing my emphasis in life was the health of my husband and children, and the study of nutrition to provide meals of value for the family and farm employees. So it was obvious that health and nutrition was the areas I used my pendulum. While for Ren it was the health of the farm animals and the soil. While these areas are still very important to us, our dowsing encompasses a much wider field now. From the Society dowsing courses, the four day 'Spiritual Response Therapy' course with Robert Detzler from the U.S.A. the ever so many books and the teaching of those who have gone before us, our questions and searching knew no bounds. All in a drive in our learning to search out the truth. This path is what leads one to awareness – enlightenment – wisdom – call it what you will. I remember well, laughing with Albino on the discussion of wisdom. We agreed that the wiser you get the more you realise you have to shut your mouth! Instead, speak in response to the seekers and searchers, and allow them to grow. The real seekers will drag your accumulated knowledge out of you. So not everybody will be attracted to dowsing. Reminds me of the example, you can lead a horse to water, but you can't make it drink. It has to want to. You may even drown it trying to force the issue!

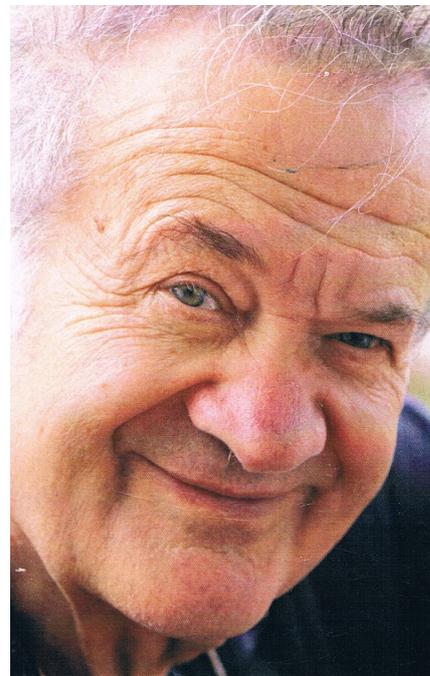

Casting my eyes over my own personal library the topic range from Health- both mental and physical; Nutrition – covering food content giving which food for which ailment: History – covering from the Old Testament to current times. Funnily enough several books crossover between the sections and it is a toss-up which section they go into. I instantly think of my precious book 'The Scottish Kitchen' a reprint of old Scottish recipes. Recipes that show: -The importance of and how to dry and salt fish and meat before the day of the refrigerator: The savoury more than tasty treats, before the assault of sugar on the country's taste buds: The fermentation of vegetables and juices, not only to store for winter use, but for a source of essential probiotics: and the simple process of raw milk and cream into butter and cheese. The big question should this book go into the nutrition, health or history section. But before reaching for my pendulum I did a bit of soul searching. This precious book captures the traditional eating of the Scots. It goes a long way to understanding my food likes and dislikes (not many of those), no doubt inherited from my 100% Scottish ancestry. It reinforces my strong belief that it is so important what we put in our bodies., both the food we physically eat and the knowledge we mentally digest. It is wonderful to see in this book the continuance of ways of the preparation of real food that hark back to the Old Testament

Biblical food laws. So I am happy that it sits with the rest of my history books.

The more I seek and search to understand the energy of life and creation, the more I appreciate there is an order to everything. Rock this order and create dis-ease. Dowsing gives us such a simple and effective way to check or detect and work with or balance energies, we can achieve ease, or a state of lack, of disease.

Albino instilled in us to uphold the mission statement as in our Constitution, to TEACH, TEACH, TEACH dowsing. Our meetings, and our quarterly Journals (that are so important to the majority of our members around the country) must reflect the importance of teaching dowsing. Yes embrace all aspects of life (energy) as per our library books, but have these aspects presented to show how they can, or do interact with dowsing.

It is not so many years ago, that our Society, that was legally registered as a Charitable Trust, had our Charity status removed. When the Society was formed in 1955 the teaching of dowsing, which enabled anyone to help themselves in so many aspects of life, was deemed to be of a charitable nature. This century's officialdom deems 'charitable' to mean the donating of money! From this Albino impressed upon us strongly to uphold our stated mission statement to teach dowsing, and to not get sidetracked into being anything other than proponents of dowsing.

Far be it for the Society, of loss any other standing, through veering off course.

Ren and I are eternally grateful for the knowledge that Albino imparted to us.

Alison is a long standing member of the NZ Society.

SOCIETY NOTICES

MEETINGS

Monthly meetings are held on the THIRD MONDAY of each month

7.30pm –Entrance \$6.00

Mt Eden Senior Citizens Hall

487 Dominion Rd, Mt Eden, AUCKLAND

Plenty of parking on the road behind the Hall

CALENDAR

DATE	TOPIC	SPEAKER
June 18th	DVD on Prosperity	Raymon Grace
July 16th	Mythology & Secrets of Spiders	Peter Patterson
Aug 20th	Workshop—Yet to be decided upon	

PENDULUMS

Polished Natural Wood	15.00
Stainless Steel with silver chain and key ring	20.00
Pendulum Pouches	3.00

BOOKS

..... Wisdom of Water by Alanna Moore	45.00
Companion Letter to Robin	20.00
Technique of Colour Healing by Herbert George	25.00
Art of Dowsing	20.00

*All items available at Monthly Meetings or from the Treasurer
When ordering by mail please add \$5.00 for post and packaging.*

A complete library list is available on request.
Library books available for reading by post for cost of postage.

If you are in a position of being able to bequeath funds
Considering us would be greatly appreciated -
The New Zealand Society of Dowsing & Radionics Incorporated.

THE NEW ZEALAND SOCIETY OF DOWSING & RADIONICS INCORPORATED

STATEMENT OF PURPOSE

The objects of the Society are as follows:

- Promote, develop and record the principle knowledge and techniques of the system of Dowsing and Radiesthesia incorporating the teaching of the late Herbert George and to incorporate the laws of science with the philosophies of various cultures throughout the ages.
- Collate, disseminate and publish information relating to the object of the Society and to provide Library facilities and other services for Society Members.
- Encourage, assist and instruct individuals with classes for the understanding of the Metaphysical and Paranormal aspect of life, outlining the basic ethics and principles of Dowsing.
- Encourage and promote Dowsing, Radiesthesia in a manner consistent with the highest standard of personal integrity.
- Encourage all members to uphold the dignity, integrity and reputation of the Society, in a code of conduct that always reflects the ideals and standards set out by the Society.
