

HOW TO MAKE AN ATLANTEAN POWER ROD

- 1) Dowse your suitability to work a power rod.
- 2) Select quart crystals with natural and not polished facets.
- 3) Dowse for the suitability of your crystal to be made into a power rod.
Dowse the diameter and length of copper tube.
Dowse which end the crystal goes.
- 4) Cuts into ends of pipe and spread to accommodate crystal snugly.
- 5) Use plumbers' silicon around crystal – not over the end. Similarly with end cap.
I use a spare piece of pipe, cut, flattened and then snipped and sanded to form a disc.
Then glued with silicon. After 24 hours, surplus silicon can be cut with knife.
- 6) A 1" – 2" wide strip of leather, long enough to wind around copper tube, is then glued on with 'super fix' or instant glue.

NOTES:

- Crystals should be cleansed in salt water; in running water; or white pomander.
- Brass pipe is even better than copper.
- Be careful where you point the power rod.
- Be especially careful when working on your head.
- Dowse for permission, colour and length of time of treatment.
- Always use with integrity.
- Do not wish anything on anybody that you would not like done to yourself.
- Help, heal and raise up spirituality and it will come back to you in kind.
- Write down every answer, so you can concentrate on the questions, not having to remember the answers.
- God does not like to be asked twice.
