

Welcome to the June edition of the Journal of the New Zealand Society of Dowsing & Radionics Inc. Winter is the season for reflection on the past year, planning the next growing season and reading books. I have access to a large number of books on a multitude of subjects that were discarded from a private library. The first book that caught my eye was written in the 1960s by a dentist on his battle with industry to stop the fluoridation of public water supplies. His research on the effect of fluoride on teeth on people in areas where this chemical is added to the water, plus where the water is naturally high in fluoride, compared to teeth in areas of non-fluoridated water, is a very convincing argument to have it removed from water supplies. Not only people suffer from mottled teeth, but cows also suffer, when grazed on areas around fertilizer plants and especially aluminium smelters, from which fluoride is a waste product. Of course this book has nothing to do with dowsing, but everything to do with health of the body. Dowse, in parts per million, for presence of fluoride in the body, or affected tissue. Dowse not only when mottled teeth and soft bones are present, but when skin lesions tumours and arthritis are encountered. By eliminating all water, foods, medicines, toothpaste and household cleaning products containing fluoride, the body often, sometimes within a week, shows signs of better health.

The author lectured in Europe, Great Britain and Scandinavia and all over his native U.S.A. and refuted all the arguments for the fluoridation of water that are still being used 50 years later. As dowsers, we should check for fluoride being retained in the body and the possible source of this chemical before surgery for knee and hip replacements. Not all people retain fluoride to the same degree.

The other book I picked up was written by a newspaper and radio journalist on interviews from witnesses on sightings and close encounters with UFO's. The author points out how sightings of dirigibles in the days of horse and cart, up to sleek disc shapes in the 1960s have always been a leap ahead of our technology. In the U.S.A., as in New Zealand, there have been sightings of spheres, discs, egg shapes, spindles and triangular shapes, of which, some left impressions in the ground, burnt patches and disabled cars. In most cases, witnesses are approached by military or other officials who coerce or ridicule honest people into silence. Nothing reaches main stream media and when

pressed officials speak of shooting stars, Venus, helicopters or refraction of light. The one section of society they cannot coerce is a body of respectable astronomers watching domes being built on the surface of the moon.

As dowsers with inquisitive minds, we should all dowse the answers to who and what and where they have come from and what are the real reasons why we are being denied the truth. – And quoting from the 'X Files' "the answer is still out there"!
